

**Mounting options with the Metz antenna:**

The L-bracket supplied with the Metz antenna (1) can be used to mount the antenna directly to a flat surface such as the face of the mast or cabin top. It can also be used with the quick release bracket for rail mounting (2). Remove the supplied L bracket and the antenna will mount directly on flat or off-set brackets (3) for masthead mounting.

By using the threaded mount adapter, the Metz antenna can be mounted on brackets such as ratchet mounts (4), fixed rail mounts (5), ratchet rail mounts (6) In picture (7) the Metz antenna is shown mounted on a stainless steel ratchet mount using a threaded mount adapter.

The Metz 114 antenna (8) comes with a threaded adapter and either 6m or 10m of RG58 cable fitted. For longer cable runs and where RG8X cable is the preferred choice, use the threaded mount adapter kit (9).

You can also mount the Metz on to a threaded base (10) and extension tube (11)
